# 96-GAS-NEEDLES SAMPLE CONCENTRATOR LTCON8-2

## 96-GAS-NEEDLES SAMPLE CONCENTRATOR LTCON8-2

96-Gas-Needles Sample Concentrators is a device that is used to perform the rapid evaporation of the solvents from the samples in 96-needle microplate which contains  $96 \times 0.2$ ml microtubes in a single batch. It uses the principle of solvent evaporation to concentrate the samples. In a dry block heater, the stream of inert gas is passed above the surface of the sample which causes evaporation, and the sample gets concentrated.

Used in Drug screening, hormone analysis, liquid phase.

Also known as Laboratory Concentrators.

### LTCON8-2 96-GAS-NEEDLES SAMPLE CONCENTRATOR

The heater heats the sample rapidly to the evaporation temperature, and at the same time, the gas is blown to the surface of the solution through the gas needle, which promotes rapid evaporation of the solution and concentration of the sample

The height of the air cavity can be adjusted. The length of a standard gas needle is 80 mm

The entire equipment can be put into ventilation cabinet when the concentration sample in toxic solvents

Built in overheat protection, automatic fault detection and fault beep alarm devices LED displays immediate temperature and diminishing time. Operation is simple
